

Joomla Community

Joomla Community

The Community Builder suite extends the Joomla! website user management system, and allows you to manage those users.

Key features include: enhanced registration workflows, user lists, connection paths between users, admin defined tabs and user profiles, image upload, front-end workflow management, integration with other components, like PMS, Newsletter, Forum, Galleries.

Have you ever wanted to create a community website, or thought about having part of your company website made into an intranet for your staff. With community Builder you can create a community site that is open to the public or just for private members/staff only, allowing your staff to communicate with other members of staff, update their profiles, manage their blogs, galleries and forum posts.

Registration Types: Community builder allows you to offer paid and free site registration.

Community Features

Blogs: Blogs allow members to share in their life experiences, share their knowledge with others, privately or publicly, with an integrated text editor your community blog users will be able to style their own text and insert images into their blog pages.

Forums: A public and or private message board system, where your members will be able to share information and ask other members of the site questions. As an administrator, you will have full control over the forum posts, which allow you to edit and delete topics and posts that may not be suitable.

Who's online: This feature will display the user-names of those members who are currently online and also display the number of guests that are viewing your site in real time.

Private Messaging: The PMS (Private Messaging System) allows your visitors to send private emails to each other.

Streaming Media: The built in media tool allows your members show their videos online by linking to their YouTube & Google Video's which will then be displayed into their blogs.
